CMPSCI 326
Project Minutes #1
Overview
02/2015

----- February 7th, 2015 -----

Logo Creation

tbcaldwe [4:10 PM]
so I'm looking at the project and it looks like we need a logo, anybody a good artist?

gary [4:11 PM]
*throws hat into the ring

phozier [4:13 PM]
I have a pen for the iPad that's great for sketching if anyone's up to drafting the logo

grayson [5:13 PM]
I think we need a name first

Finalizing, Voting & Discussion on Web App. Concepts

gary [6:27 PM]
I think we should take a vote on what project we want to go with. My vote is the "GradeTracker" idea that you put information in and it calculates your grade

gary [6:28 PM]
Tells you how much leeway you have, makes predictions and such

mainkhan [6:45 PM]
I give my vote to the tinder for study groups

tbcaldwe [6:59 PM]
I also like the grade tracker idea

phozier [7:07 PM]
I like the GradeTracker concept

bpchasse [7:13 PM]
I think we should do grade tracker and then expand it to study tinder if necessary.

----- February 8th, 2015 -----

grayson [12:10 AM]
Study tinder. I think the demand is more real there

Finalizing Markdown Bios

bpchasse [3:06 PM]
So I think by vote, it's GradeTracker. If we are told we need to have a more complex project, then we can switch to/include Study Tinder.

It looks like today is the due date for us to submit out team profile.md

grayson [3:11 PM]
It seems to me like grade tracker would have almost no server side component, correct?

bpchasse [3:14 PM]
maybe?

gary [3:16 PM]
#false

gary [3:17 PM]
Plenty of integration for what school has what classes after they've been entered, potentially web crawling tech

tbcaldwe [3:19 PM]
I think there are definitely a lot of ways to include a server component, even if it's not an immediate necessity to this particular idea

components. I think integrating two concepts is a solid approach.

gary [3:28 PM]
@channel: pls just take some time to fill in the bios today. I'm heading out to get food around 4 oclock and i'm gonna hammer away at the markdown document tonight.

bpchasse [3:35 PM]
I'm working on a markdown in the repo as that has my bio in it.

gary [3:36 PM]
okei so do you want to do the whole thing or push it to the repo and ill snag it and put in the rest

bpchasse [3:37 PM]
I'm going to push once i'm finished with my personal spot. But then it'll be formatted for all you folks

bpchasse [3:37 PM]
i'll post in here within an hour

mainkhan [3:39 PM]
So should I be writing my bio in the Google doc still?

gary [3:40 PM]

phozier [3:24 PM]
I agree. The grade tracker could work with another concept that relies more on server side

Don't have to anymore just wait for him to push it then pull and write it

...Continuing to Finalize Markdown Bios

grayson [3:42 PM]
I might have time to hash a logo together

gary [8:30 PM]
But from the directory that's inside the repo

grayson [8:33 PM]
ok logo and bio pushed

grayson [8:44 PM]
you need to do "git add ." then "git commit -am "description"" then "git push" and enter your password

…
grayson [9:08 PM]
should we put the logo above the title?

gary [9:11 PM]
Na

grayson [9:20 PM]
what about "start digging" as slogan

grayson [9:20 PM]
oh wait is that already ancestry?

bpchasse [9:28 PM]
HA

tbcaldwe [9:29 PM]

grayson [9:30 PM]
I already looked at that website, I decided not to include it because I thought a logo that big just loc stupid in the profile page but what do you guys thi

tbcaldwe [9:31 PM]
yeah, it looks kind of weird if we actually want the text to be visible. still looks like a heart at smaller sizes though

gary [9:32 PM]
I'm fine with that we got

bpchasse [9:33 PM]
ascii image would look really weird

mainkhan [9:34 PM]
Yeah I'm fine with what we have

phozier [9:42 PM]
I think it's cool. It's a clean layoutt

phozier [9:43 PM]
Btw, there's an .md extension for Chrome if you guys are looking looking for a good markdown viewer [link]
Markdown Preview
Converts and previews markdown files..

grayson [9:45 PM]
too late I found it first [link]
Grayson Kempster   grayson
[link]

if we want an ascii thing to include in our .md, http://www.glassgiant.com/ascii/ does a pretty good job at converting the logo grayson posted into an ascii equivalent. it's up to everyone's discretion though, for the name to actually be legible it has to be kind of large

Feb 8th at 6:38 PM

phozier [9:46 PM]
Ohh snap

phozier [9:46 PM]
great minds

Concluding Team Meeting

----- Yesterday February 9th, 2015 -----

tbcaldwe [12:01 AM]
looks good to me, i just can't see the logo in gitblit (i forget if we already talked about that though)

grayson [12:03 AM]
yeah I think GitBlit doesn't do folder pathing?

tbcaldwe [12:04 AM]
right makes sense. yeah it all looks good to me then

phozier [12:06 AM]
Oh man jsut realized gitblit doubles as a markdown viewer

tbcaldwe [12:09 AM]
hahaha

phozier [12:13 AM]
Lol yeah, I think the .md is put together well + the slogan is catchy

bpchasse [12:15 AM]
I give it my approval
